+91 9313715798 | mehtarutansh7@gmail.com | Ahmedabad, India

OBJECTIVE

Data Science fresher with hands-on, end-to-end ML project experience — from raw data collection and SQL-based cleaning to feature engineering, model deployment, and BI dashboarding. Built two production-style projects (churn prediction, used-car pricing) both achieving 90%+ model performance and framed around real business KPIs. Seeking a Data Analyst / Data Scientist role where I can turn raw data into decisions.

SKILLS

Data & Analytics: Python, Pandas, NumPy, Scikit-learn, SQL, Feature Engineering, Exploratory Data Analysis

Machine Learning: Random Forest, Linear Regression, Logistic Regression, Model Evaluation (R^2 , MAE, Precision, Recall)

Visualization & BI: Power BI, Plotly, Streamlit, Dashboard Design

Tools & Platforms: Git, GitHub, MySQL, Jupyter Notebook, VS Code, Microsoft Excel

Concepts: Data Cleaning, Data Merging, Feature Engineering, ML Model Deployment, Business Analysis

PROJECTS

CustomerPulse — Customer Churn Prediction & Retention Intelligence

Python | Pandas | MySQL | Scikit-learn | Streamlit | Plotly | Power BI | Git

- Engineered end-to-end data pipeline processing 541,909 e-commerce transactions through MySQL, reducing to 344,435 clean rows after SQL-based EDA
- Built RFM feature engineering pipeline segmenting 3,920 customers into Champions, Loyal, At Risk, and Lost categories
- Trained Random Forest Classifier achieving 83% accuracy and 94% churn recall, identifying 94 of every 100 churning customers before they leave
- Developed interactive Streamlit app with real-time churn probability scoring and personalized retention recommendations for marketing teams
- Built Power BI dashboard (6 visuals) identifying ₹379K revenue at risk from the At Risk segment, enabling data-driven retention budget prioritization

GitHub: github.com/mehta-rutansh/CustomerPulse

CarlQ — India's Smart Used Car Advisor

Python | Pandas | Scikit-learn | Streamlit | Plotly | Git

- Built a unique dataset by combining 3 sources — CarDekho (15,399 transactions), Global NCAP safety ratings, and real service cost data
- Designed a custom 5-factor personalized scoring engine (Safety, Performance, Reliability, Maintenance Cost, Value for Money) with user-adjustable weights
- Trained Random Forest Regressor achieving $R^2 = 92.19\%$ and average price prediction error of ₹93,068 across 15,399 real used car transactions
- Deployed interactive Streamlit app with radar charts, plain-English “Why This Car?” explanations, and a price fairness checker

GitHub: github.com/mehta-rutansh/CarlQ

INTERNSHIP EXPERIENCE

Data Science & ML Intern — Brainybeam Technologies Pvt. Ltd.

Ahmedabad | December 2025 – Present

- Designed and developed Power BI dashboards to visualize business data and deliver actionable insights to non-technical stakeholders
- Performed end-to-end data cleaning and preprocessing — handling null values, removing duplicates, fixing data type inconsistencies across real-world datasets
- Trained and evaluated machine learning models including Linear Regression, Logistic Regression, and Random Forest for business prediction tasks
- Built and deployed Streamlit web applications to make ML model outputs accessible to business users

EDUCATION

M.Sc. Information Technology — GLS University, Ahmedabad

Graduated April 2026 | CGPA: 7.00

B.Sc. Information Technology — GLS University, Ahmedabad

Graduated April 2023 | CGPA: 6.66

Higher Secondary (12th) — St. Mary's School, Ahmedabad

March 2020 | Percentage: 55%

Secondary (10th) — St. Mary's School, Ahmedabad

March 2018 | Percentage: 65.5%

CERTIFICATIONS

- SQL (Intermediate) — HackerRank
 - Feature Engineering — Kaggle
-
